

Hospitals' Diagnostic Partner

Oculus Pathology is an independent, physician-owned pathology practice and stand-alone lab.

We work with hospitals of all sizes across the country to provide lab testing and diagnostic services. We are powered by a network of more than 50 specialty and subspecialty physicians board-certified in pediatric pathology, surgical pathology, neuropathology, dermatopathology, hematopathology, and more.

Our pathologists provide the highest level of precision, speed, and diagnostic clarity for our hospital clients so they can:

- Support in-house physicians with fast, frictionless, and accurate pathology services.
- Reduce length of stay.
- Achieve clinical excellence, patient safety, and financial goals.
- Deliver patient satisfaction.

By the Numbers

99%

of cases are handled internally

24-48

hour turnaround time

50+

specialty and subspecialty pathologists

250,000

surgical biopsies per year

Partnering with Oculus Pathology, hospitals can:

-  Prevent leakage of pathology cases and revenue. Our pathology practice has a breadth and depth of specialty and subspecialty expertise rarely seen outside of large academic medical centers. Oculus' embedded pathologists in your hospital have immediate access to their colleagues within the Oculus Pathology practice for subspecialty consultation and second opinions.
-  Have an in-house lab medical director working with your lab team to ensure evidence-based practices and adherence to quality and patient safety standards and to achieve and maintain CLIA certification.
-  Secure pathologist expertise and consultation for tumor boards, leadership teams, executive committees, and residency and fellow education.
-  Eliminate inefficient practices and streamline lab operations.
-  Provide physicians with a collegial pathology partner that prioritizes communication, responsiveness, and collaboration.
-  Implement new service lines.

The Results

- Lower lab costs
- Faster turnaround time
- All pathology services retained in-house
- Reduced out-of-house consultative expenses

“The field of pathology – disease diagnosis, categorization, and staging – is evolving so rapidly. A decade ago, for example, there were just four categories of lymphoma. Now, there are more than 100. Targeted, appropriate treatment starts with accurate and precise diagnosis and that requires pathologists to cultivate a deep level of specific, up-to-date knowledge and subspecialty expertise. Today's hospitals can't rely on just one pathologist; they need a bench of pathology expertise, and Oculus Pathology delivers that.”

Dr. Suzanne Ledet

Oculus pathologist since 1998
